

INTERIM GUIDANCE FOR HIGHER EDUCATION RESEARCH DURING THE COVID-19 PUBLIC HEALTH EMERGENCY

When you have read this document, you can affirm at the bottom.

As of June 26, 2020

Purpose

This Interim Guidance for Higher Education Research during the COVID-19 Public Health Emergency ("Interim COVID-19 Guidance for Higher Education Research") was created to provide managers/operators of higher education research facilities and their employees and contractors with precautions to help protect against the spread of COVID-19 as research facilities re-open or continue to operate.

These guidelines are minimum requirements only and any employer is free to provide additional precautions or increased restrictions. These guidelines are based on the best-known public health practices at the time of publication, and the documentation upon which these guidelines are based can and does change frequently. The Responsible Parties – as defined below – are accountable for adhering to all local, state and federal requirements relative to higher education research. The Responsible Parties are also accountable for staying current with any updates to these requirements, as well as incorporating same into management and/or any Site Safety Plan.

Background

On March 7, 2020, Governor Andrew M. Cuomo issued [Executive Order 202](#), declaring a state of emergency in response to COVID-19. Community transmission of COVID-19 has occurred throughout New York. To minimize further spread, social distancing of at least six feet must be maintained between individuals, where possible.

On March 20, 2020, Governor Cuomo issued [Executive Order 202.6](#), directing all non-essential businesses to close in-office personnel functions. Essential businesses, as defined by Empire State Development Corporation (ESD) [guidance](#), were not subject to the in-person restriction, but were, however, directed to comply with the guidance and directives for maintaining a clean and safe work environment issued by the New York State Department of Health (DOH), and were strongly urged to maintain social distancing measures to the extent possible.

On April 12, 2020, Governor Cuomo issued [Executive Order 202.16](#), directing essential businesses to provide employees, who are present in the workplace, with a face covering, at no-cost, that must be used when in direct contact with customers or members of the public during the course of their work. On April 15, 2020, Governor Cuomo issued [Executive Order 202.17](#), directing that any individual who is over age two and able to medically tolerate a face-covering must cover their nose and mouth with a mask or cloth face-covering when in a public place and unable to maintain, or when not maintaining, social distance. On April 16, 2020, Governor Cuomo issued [Executive Order 202.18](#), directing that everyone using public or private transportation carriers or other for-hire vehicles, who is over age two and able to medically tolerate a face covering, must wear a mask or face covering over the nose and mouth during any such trip. It also directed any operators or drivers of public or private transport to wear

a face covering or mask which covers the nose and mouth while there are any passengers in such a vehicle. On May 29, 2020, Governor Cuomo issued [Executive Order 202.34](#), authorizing business operators/owners with the discretion to deny admittance to individuals who fail to comply with the face covering or mask requirements.

On April 26, 2020, Governor Cuomo [announced](#) a phased approach to reopen industries and businesses in New York in phases based upon a data-driven, regional analysis. On May 4, 2020, the Governor [provided](#) that the regional analysis would consider several public health factors, including new COVID-19 infections, as well as health care system, diagnostic testing, and contact tracing capacity. On May 11, 2020, Governor Cuomo [announced](#) that the first phase of reopening would begin on May 15, 2020 in several regions of New York, based upon available regional metrics and indicators. On May 29, 2020, Governor Cuomo [announced](#) that the second phase of reopening would begin in several regions of the state, and announced the use of a new early warning dashboard that aggregates the state's expansive data collection efforts for New Yorkers, government officials, and experts to monitor and review how the virus is being contained to ensure a safe reopening.

In addition to the following standards, managers/operators of higher education research facilities must continue to comply with the guidance and directives for maintaining clean and safe work environments issued by DOH.

Please note that where guidance in this document differs from other guidance documents issued by New York State, the more recent guidance shall apply.

Standards for Responsible Research in Higher Education in New York State

No higher education research activities can occur without meeting the following minimum State standards, as well as applicable federal requirements, including but not limited to such minimum standards of the Americans with Disabilities Act (ADA), Centers for Disease Control and Prevention (CDC), Environmental Protection Agency (EPA), and United States Department of Labor's Occupational Safety and Health Administration (OSHA).

The State standards contained within this guidance apply to all higher education research activities in operation during the COVID-19 public health emergency until rescinded or amended by the State. The research facility manager/operator, or another party as may be designated by the research facility manager/operator (in either case, "the Responsible Parties") shall be responsible for meeting these standards.

The following guidance is organized around three distinct categories: people, places, and processes.

I. PEOPLE

A. Physical Distancing

- Responsible Parties must ensure that for any work occurring indoors, the total occupancy is limited to 50% of the maximum occupancy for a particular area as set by the certificate of occupancy; and
- Responsible Parties must ensure that a distance of at least six feet is maintained among individuals at all times, unless safety or the core activity requires a shorter distance. Any time individuals must come within six feet of another person, acceptable face coverings must be worn. Individuals must be prepared to don a face covering if another person unexpectedly comes within six feet.

- Acceptable face coverings for COVID-19 include but are not limited to cloth-based face coverings and disposable masks that cover both the mouth and nose.
- However, cloth, disposable, or other homemade face coverings are not acceptable face coverings for workplace activities that typically require a higher degree of protection for personal protective equipment (PPE) due to the nature of the work (e.g. if working with flammable materials or chemicals, ensure face coverings are flame-resistant). For those activities, N95 respirators or other PPE used under existing industry standards should continue to be used, as is defined in accordance with [OSHA guidelines](#).
- Responsible Parties should develop policies to minimize the number of individuals needed to be at the location at a given time. For example, for activities that require only one individual to complete the activity safely, Responsible Parties should limit the activity to only one individual (e.g. only one individual present to feed animals).
- Responsible Parties may modify the use and/or restrict the number of workstations (e.g. lab benches) so that individuals are at least six feet apart in all directions (e.g. side-to-side and when facing one another) and are not sharing workstations without cleaning and disinfection between use. When distancing is not feasible between workstations, Responsible Parties must provide and require the use of face coverings or physical barriers (e.g. plastic shielding walls, in lieu of face coverings in areas where they would not affect air flow, heating, cooling, or ventilation).
 - If used, physical barriers should be put in place in accordance with [OSHA standards](#).
 - Physical barrier options may include: strip curtains, cubicles, plexiglass or similar materials, or other impermeable dividers or partitions.
- Responsible Parties should limit the use of shared workstations (e.g. "hot-desks"), to the extent practicable. To the extent that such workstations remain in use, they must be cleaned and disinfected between users.
- Responsible Parties should prohibit the use of small spaces (e.g. elevators, staff rooms) by more than one individual at a time, unless all individuals in such space at the same time are wearing acceptable face coverings. However, even with face coverings in use, occupancy must never exceed 50% of the maximum capacity of the space or vehicle, unless it is designed for use by a single occupant. Responsible Parties should increase ventilation with outdoor air to the greatest extent possible (e.g. opening windows and doors), while maintaining safety protocols. Responsible Parties should take additional measures to prevent congregation in elevator waiting areas and limit density in elevators, such as enabling the use of stairs.
- Responsible Parties should put in place measures to reduce bi-directional foot traffic using tape or signs with arrows in narrow aisles, hallways, or spaces, and post signage and distance markers denoting spaces of six feet in all commonly used areas and any areas in which lines are commonly formed or people may congregate (e.g. lab benches, clock in/out stations, health screening stations, etc.).
 - Responsible Parties should mark six feet distance circles around workstations and other common stationary work areas.
- Responsible Parties must post signs throughout the facility, consistent with DOH COVID-19 signage. Responsible Parties can develop their own customized signage specific to their workplace or setting, provided that such signage is consistent with the Department's signage. Signage should be used to remind individuals to:
 - Cover their nose and mouth with a face covering.

- Properly store and, when necessary, discard PPE.
- Adhere to physical distancing instructions.
- Report symptoms of or exposure to COVID-19, and how they should do so.
- Follow hand hygiene and cleaning and disinfection guidelines.
- Follow appropriate respiratory hygiene and cough etiquette.

B. Gatherings in Enclosed Spaces

- Responsible Parties must limit in-person employee gatherings (e.g. staff meetings) to the greatest extent possible and use other methods such as video or teleconferencing whenever possible, per CDC guidance "[Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 \(COVID-19\)](#)." When videoconferencing or teleconferencing is not possible, Responsible Parties should hold meetings in open, well-ventilated spaces and ensure that individuals maintain six feet of social distance between one another (e.g. leave space between chairs, have individuals sit in alternating chairs).
- Responsible Parties should consider closing non-essential amenities and communal areas that promote gathering or are high-touch.
- Responsible Parties must put in place practices for adequate social distancing in small areas, such as restrooms and breakrooms, and signage and systems (e.g. flagging when occupied) to restrict occupancy when social distancing cannot be maintained in such areas; and
- Responsible Parties should stagger schedules for individuals using the facility to observe social distancing (e.g. six feet of space) for any gathering (e.g. coffee breaks, meals, and shift starts/stops).

C. Workplace Activity

- Responsible Parties must take measures to reduce interpersonal contact and congregation, through methods such as:
 - limiting in-person presence to only those staff who are necessary to be on site;
 - limiting/postponing research activities which require person-to-person engagement in tight spaces;
 - adjusting workplace hours;
 - reducing on-site workforce to accommodate social distancing guidelines;
 - shifting design (e.g. A/B teams, staggered arrival/departure times);
 - implementing lab/facility usage sign-up policy;
 - prioritizing tasks that allow for social distancing over those that do not; and/or
 - avoiding multiple teams or individuals working in one area by staggering scheduled tasks and using signs to indicate occupied areas.
- Responsible Parties should encourage employees to work from home when feasible. Responsible Parties may choose to develop return-to-office tiers or waves for employees based on factors such as function, safe transportation, and ability to work remotely.

- Responsible Parties should encourage employees who operate specialized equipment which can be controlled remotely, to continue to do so.
- Responsible Parties may allow research activities involving human subjects research where risk can be mitigated, and research subjects can wear proper PPE and follow social distancing guidance. Human research subjects must be considered when calculating facility capacity and abide by all distancing, PPE and other requirements for personnel in this document, as applicable.

D. Movement and Commerce

- Responsible Parties should limit all non-essential travel.
- Responsible Parties must prohibit non-essential visitors from entering the site, to the extent possible. Only essential visitors should enter the site.
 - Responsible Parties should coordinate with research teams to determine if any essential visitors are scheduled to enter the facility.
- Responsible Parties must establish designated areas for pickups and deliveries, limiting contact to the extent possible.
- Responsible Parties should limit on-site interactions (e.g. restricting access to break rooms, staggering schedules) and movements (e.g. their employees should remain near their workstations as often as possible)

II. PLACES

A. Protective Equipment

- In addition to the necessary PPE as required for certain workplace activities, Responsible Parties must procure, fashion, or otherwise obtain acceptable face coverings, and provide such coverings to their employees while at work at no cost to the employee. An adequate supply of face coverings, masks and other required PPE should be on hand in the event an employee needs a replacement, or a visitor is in need. Acceptable face coverings include, but are not limited to, cloth (e.g. homemade sewn, quick cut, bandana), surgical masks, N95 respirators, and face shields.
- Face coverings must be cleaned or replaced after use and may not be shared. Consult CDC [guidance](#) for additional information on cloth face coverings and other types of PPE well as instructions on use and cleaning.
 - Note that cloth, disposable, or other homemade face coverings are not acceptable face coverings for workplace activities that typically require a higher degree of protection for PPE due to the nature of the work (e.g. if working with flammable materials or chemicals, ensure face coverings are flame-resistant). For those activities, N95 respirators or other PPE used under existing industry standards should continue to be used, as is defined in accordance with [OSHA Standards](#).
- Responsible Parties must allow their employees and contractors to use their own acceptable face coverings but cannot require their employees and contractors to supply their own face coverings. Further, this guidance shall not prevent employees and contractors from wearing their personally owned protective coverings (e.g. surgical masks, N95 respirators, or face shields). The Responsible

Parties may require employees and contractors to wear more protective PPE due to the nature of their work. Employers should comply with all applicable OSHA standards.

- Responsible Parties must train their employees on how to adequately put on, take off, clean (as applicable), and discard PPE, including but not limited to, appropriate face coverings. Such training should be extended to contractors if the Responsible Parties will be supplying the contractors with PPE.
- Responsible Parties must ensure that their employees and contractors wear face coverings when interacting with one another and/or other individuals within six feet distance AND without a physical barrier (e.g. plexiglass).
- Responsible Parties must put in place measures to limit the sharing of objects, such as equipment, machinery, materials, and vehicles, as well as the touching of shared surfaces, such as touchscreens or equipment; or, require individuals to wear gloves (trade-appropriate or medical) when in contact with shared objects or frequently touched surfaces; or, require individuals to perform hand hygiene before and after contact.

B. Hygiene, Cleaning, and Disinfection

- Responsible Parties must ensure adherence to hygiene and cleaning and disinfection requirements as advised by the CDC and DOH, including "[Guidance for Cleaning and Disinfection of Public and Private Facilities for COVID-19](#)," and the "[STOP THE SPREAD](#)" poster, as applicable. Responsible Parties must maintain logs that include the date, time, and scope of cleaning and disinfection.
- Responsible Parties must provide and maintain hand hygiene stations on site, as follows:
 - For handwashing: soap, running warm water, disposable paper towels, and a lined garbage can.
 - For hand sanitizing: an alcohol-based hand sanitizer containing at least 60% alcohol for areas where handwashing facilities may not be available or practical.
 - Make hand sanitizer available throughout the facility. It should be placed in convenient locations, such as at entrances, exits, and elevators. Touch-free hand sanitizer dispensers should be installed where possible.
 - Responsible Parties should place signage near hand sanitizer stations indicating that visibly soiled hands should be washed with soap and water; hand sanitizer is not effective on visibly soiled hands.
 - Place receptacles around the facility for disposal of soiled items, including PPE.
- Responsible Parties must provide appropriate cleaning and disinfection supplies for shared and frequently touched surfaces and encourage their employees to use these supplies following manufacturer's instructions for use before and after use of these surfaces, followed by hand hygiene.
 - To reduce high-touch surfaces, Responsible Parties should install touch-free amenities such as water fountains, trash-cans, and hand-dryers.
- Responsible Parties must conduct regular cleaning and disinfection of the site and more frequent cleaning and disinfection for high risk areas used by many individuals and for frequently touched surfaces. Cleaning and disinfection must be rigorous and ongoing and should occur at least after each shift, daily, or more frequently as needed. Please refer to DOH's "[Interim Guidance for Cleaning](#)

and Disinfection of Public and Private Facilities for COVID-19” for detailed instructions on how to clean and disinfect facilities.

- Responsible Parties must ensure regular cleaning and disinfecting of restrooms. Restrooms should be cleaned and disinfected more often depending on frequency of use.
 - Responsible Parties must ensure distancing rules are adhered to by using signage, occupied markers, or other methods to reduce restroom capacity where feasible.
- Responsible Parties must ensure that equipment and tools are regularly cleaned and disinfected using registered disinfectants, including at least as often as employees and contractors change workstations or move to a new set of tools. Refer to the Department of Environmental Conservation (DEC) list of products registered in New York State and identified by the EPA as effective against COVID-19.
- If cleaning or disinfection products or the act of cleaning and disinfecting causes safety hazards or degrades the material or machinery, Responsible Parties must put in place hand hygiene stations for between use and/or supply disposable gloves and/or limitations on the number of employees using such machinery.
- Responsible Parties must provide for the cleaning and disinfection of exposed areas in the event an individual is confirmed to have COVID-19, with such cleaning and disinfection to include, at a minimum, all heavy transit areas and high-touch surfaces (e.g. lab tables, elevators, facility entrances, badge scanners, restrooms handrails, equipment, door handles).
- CDC guidelines on “Cleaning and Disinfecting Your Facility” if someone is suspected or confirmed to have COVID-19 are as follows:
 - Close off areas used by the person suspected or confirmed to have COVID-19.
 - Responsible Parties do not necessarily need to close operations, if they can close off the affected areas. Affected areas need to be closed off and cleaned and disinfected.
 - Open outside doors and windows to increase air circulation in the area.
 - Wait 24 hours before you clean and disinfect. If 24 hours is not feasible, wait as long as possible.
 - Clean and disinfect all areas used by the person suspected or confirmed to have COVID-19, such as offices, bathrooms, common areas, and shared equipment.
 - Once the area has been appropriately cleaned and disinfected, it can be re-opened for use
 - Employees and visitors without close or proximate contact with the person suspected or confirmed to have COVID-19 can return to the work area immediately after cleaning and disinfection.
 - Refer to DOH’s “Interim Guidance for Public and Private Employees Returning to Work Following COVID-19 Infection or Exposure” for information on “close or proximate” contacts.
 - If more than seven days have passed since the person suspected or confirmed to have COVID-19 visited or used the facility, additional cleaning and disinfection is not necessary, but routine cleaning and disinfection should continue.
- Responsible Parties must prohibit shared food and beverages among employees (e.g. self-serve meals and beverages), encourage employees to bring lunch from home, and reserve adequate space for employees to observe social distancing while eating meals.

C. Phased Reopening

- Responsible Parties are encouraged to phase-in reopening activities so as to allow for operational issues to be resolved before production or work activities return to normal levels. Responsible Parties should consider limiting the number of employees, hours, and number of customers available to be served when first reopening so as to provide operations with the ability to adjust to the changes.

D. Communications Plan

- Responsible Parties must affirm that they have reviewed and understand the state-issued industry guidelines, and that they will implement them.
- Responsible Parties should develop a communications plan for employees and visitors that includes applicable instructions, training, signage, and a consistent means to provide employees with information. Responsible Parties may consider developing webpages, text and email groups, and social media.
- Responsible Parties should encourage individuals to adhere to CDC and DOH guidance regarding the use of PPE, specifically face coverings, when a social distance of six feet cannot be maintained, through verbal communication and signage.
- Responsible Parties should post signage inside and outside of the facility to remind individuals to adhere to proper hygiene, social distancing rules, appropriate use of PPE, and cleaning and disinfection protocols.

III. PROCESSES

A. Screening and Testing

- Responsible Parties should implement mandatory daily health screening practices of their employees and, where practicable, visitors, but such screening should not be mandated for any delivery personnel.
 - Screening practices may be performed remotely (e.g. by telephone or electronic survey), before the employee or visitor reports to the facility, to the extent possible; or may be performed on site.
 - Screening should be coordinated to prevent employees or visitors from intermingling in close or proximate contact with each other prior to completion of the screening.
 - At a minimum, screening must be required for all employees, and where practicable, visitors, and completed using a questionnaire that determines whether the employee or visitor has:
 - (a) knowingly been in close or proximate contact in the past 14 days with anyone who has tested positive for COVID-19 or who has or had symptoms of COVID-19;
 - (b) tested positive for COVID-19 in the past 14 days; and/or
 - (c) has experienced any symptoms of COVID-19 in the past 14 days.
- Refer to CDC guidance on "[Symptoms of Coronavirus](#)" for the most up to date information on symptoms associated with COVID-19.

- Responsible Parties must require employees and visitors to immediately disclose if and when their responses to any of the aforementioned questions changes, such as if they begin to experience symptoms, including during or outside of work hours.
- In addition to the screening questionnaire, temperature checks may also be conducted per U.S. Equal Employment Opportunity Commission or DOH guidelines. Responsible Parties are prohibited from keeping records of employee health data (e.g. the specific temperature data of an individual), but are permitted to maintain records that confirm individuals were screened and the result of such screening (e.g. pass/fail, cleared/not cleared).
- Responsible Parties must ensure that any personnel performing screening activities, including temperature checks, are appropriately protected from exposure to potentially infectious employees, contractors, or visitors entering the facility. Personnel performing screening activities should be trained by employer-identified individuals who are familiar with CDC, DOH, and OSHA protocols.
- Screeners should be provided and use PPE, including at a minimum, a face mask, and may include gloves, a gown, and/or a face shield.
- An individual who screens positive for COVID-19 symptoms must not be allowed to enter the facility and must be sent home with instructions to contact their healthcare provider for assessment and testing; this policy does not apply if the employee or visitor is entering the facility for medical evaluation or treatment (e.g. to take a COVID-19 test in the facility).
 - Responsible Parties should provide such individuals with information on healthcare and testing resources.
 - Responsible Parties must immediately notify the state and local health department about the case if test results are positive for COVID-19.
- Responsible Parties should refer to DOH's "[Interim Guidance for Public and Private Employees Returning to Work Following COVID-19 Infection or Exposure](#)" regarding protocols and policies for employees seeking to return to work after a suspected or confirmed case of COVID-19 or after the employee had close or proximate contact with a person with COVID-19.
- Responsible Parties must designate a central point of contact, which may vary by activity, location, shift or day, responsible for receiving and attesting to having reviewed all questionnaires, with such contact also identified as the party for individuals to inform if they later are experiencing COVID-19-related symptoms, as noted on the questionnaire.
 - Identified point of contact for the higher education research facility should be prepared to receive notifications from individuals of positive cases and initiate the respective cleaning and disinfection procedures.
- Responsible Parties must designate a site safety monitor whose responsibilities include continuous compliance with all aspects of the site safety plan.
- To the extent possible, Responsible Parties should maintain a log of every person, including employees and visitors, who may have close contact with other individuals at the work site or area; excluding deliveries that are performed with appropriate PPE or through contactless means. Log should contain contact information, such that all contacts may be identified, traced and notified in the event an employee or visitor is diagnosed with COVID-19. Responsible Parties must cooperate with local health department contact tracing efforts.

B. Tracing and Tracking

- Responsible Parties must notify the state and local health department immediately upon being informed of any positive COVID-19 test result by an employee or visitor at their facility.
- In the case of an employee or visitor testing positive, the Responsible Parties must cooperate with the state and local health department as required to trace all contacts in the workplace, and the state and local health department must be notified of all individuals who entered the site dating back 48 hours before the employee or visitor first experienced COVID-19 symptoms or tested positive, whichever is earlier. Confidentiality must be maintained as required by federal and state law and regulations.
- State and local health departments may, under their legal authority, implement monitoring and movement restrictions of infected or exposed persons including home isolation or quarantine.
- Individuals who are alerted that they have come into close or proximate contact with a person with COVID-19, and have been alerted via tracing, tracking or other mechanism, are required to self-report to their employer at the time of alert and shall follow the protocol referenced above.

IV. EMPLOYER PLANS

Responsible Parties must conspicuously post completed safety plans on site for employees. The State has made available a business reopening safety plan template to guide business owners and operators in developing plans to protect against the spread of COVID-19, and such plans are adaptable for research facilities to use.
