General Description

Grounded in the Liberal Arts tradition, the College of Staten Island is committed to the highest standards in teaching, research, and scholarship. Drawing on the rich heritage of the City University of New York that has provided access to excellence in higher education since 1847, the College of Staten Island offers that same opportunity in New York City's Borough of Staten Island. The College is dedicated to helping its students fulfill their creative, aesthetic, and educational aspirations through competitive and rigorous undergraduate, graduate, and professional programs. We embrace the strength of our diversity, foster civic mindedness, and nurture responsible citizens for our city, country, and the world.

The Office of Workforce Development and Innovation develops workforce training programs designed to address critical skill gaps in high growth industries. Workforce Development provides quality, flexible and cost effective training to support the educational and training goals of individuals and organizations. We offer certificate programs and professional development courses in the healthcare, technology and business sectors. Our department draws upon the expertise of faculty and subject matter experts to deliver quality training programs.

The DEP Grade Course Instructor will deliver effective instruction in the Basic Operations, Activated Sludge, and Basic Lab modules to DEP and DC37 employees.

Topics in Basic Operations include but are not limited to introduction to wastewater treatment, Preliminary and Primary wastewater treatment, secondary wastewater treatment, advanced wastewater treatment, disinfection and effluent disposal, solids management, equipment and support systems and monitoring and regulatory requirements.

Topics in Activated Sludge include but are not limited to fundamentals of the activated sludge process, microbiology in activated sludge, control testing, flow control and associated calculations RAS and WAS flow control strategies and discuss techniques used in troubleshooting problems that may arise in the process.

Topics in Basic Lab include but are not limited to determining Biological Oxygen Demand, Total Suspended Solids, pH, Dissolved Oxygen, Settable Solids, Mixed Liquor settleability, coliform, sample collection, storage

and preservation and all associated calculations.
