# From the Executive Director

The Research Foundation of the City University of New York

**Richard F. Rothbard**  
Executive Director  
Research Foundation of CUNY

I am pleased to present this combined FY 2000 and FY 2001 Annual Report of the Research Foundation of The City University of New York. We have departed from our usual single-year format in order to provide the most up-to-date information available. Beginning with the FY 2002 Annual Report, we plan to return to the single-year format, with publication closer to the end of the fiscal year, thereby better serving the needs of the research community and the general public.

The Research Foundation, like so many other organizations and individuals, was profoundly affected by the horrific events of September 11, 2001, which inflicted substantial damage on our headquarters. Although all staff evacuated safely, the building was rendered unusable, causing suspension of operations. Thanks to the combined efforts of RF and university staff, and with the support of the business and vendor community, we were able to quickly locate and occupy new space, restore vital computer systems, and return to normal operations. I thank everyone involved in the recovery effort for their dedication.

In the coming year, we intend to continue those activities that have proven effective in advancing RF CUNY's goals, and introduce new programs that hold the promise of added success. These include technological innovations that enhance performance, while reducing paperwork and containing costs; partnerships inside and outside CUNY to compete for and obtain major grants; staff development to assure the highest levels of customer service; commercialization of intellectual property; and development of external revenue streams.

CUNY's research faculty continue to earn distinction for themselves, their departments and their campuses. The Research Foundation is committed to providing them with the services and tools that will nurture and expand their achievements even further in the years ahead.

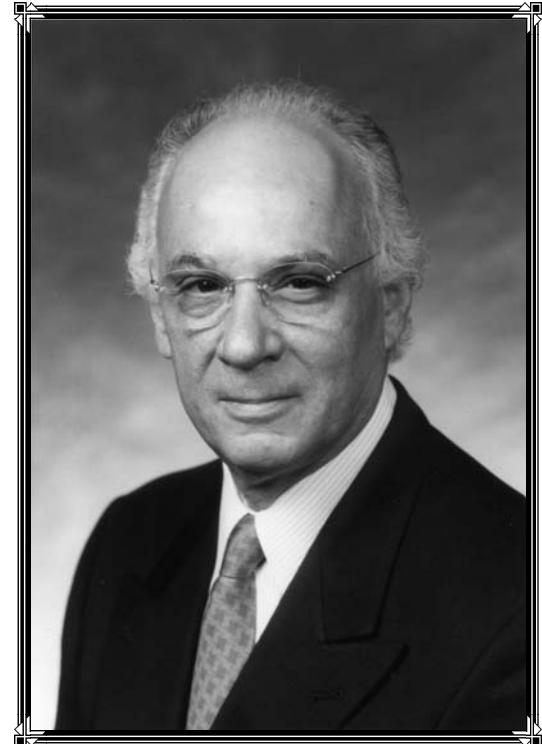

## From the Chairperson of the Board

The Research Foundation of the City University of New York

The Research Foundation is an organization vital to the success of The City University of New York. Its influence may be observed in almost every aspect of University life, from faculty research to partnerships with business, from academic programming to job training, from technology transfer to graduate student support. The Research Foundation's work reflects the broad scope of academic enterprise taking place across the University.

The City University's faculty members garner coveted grants and awards from some of the most prestigious private and public funding organizations and agencies, as well as from labor and business sources. The Research Foundation oversees this critical lifeline, providing dependable, cost-effective administration of sponsored programs. Its dedicated leadership and staff have combined hard work, state-of-the-art technology, and creativity to manage the \$214.5 million in grant support CUNY attracted in 2000 and the \$221.9 million in 2001.

It is with pride and pleasure that I congratulate the faculty of The City University of New York for its ongoing success in securing competitive grant support. On behalf of the University, I extend my gratitude and my deepest thanks to the Research Foundation for nearly forty years of outstanding service to CUNY. With the Research Foundation's support, I look forward to CUNY faculty attaining even greater levels of success in the future.

### ***Predictors of Reporting Child Maltreatment***

The objective of this study is to identify those variables which influence human service workers to report child maltreatment to child protective services. Child abuse is a national epidemic affecting millions of children annually. A major step in stopping maltreatment is to identify, and intervene in, situations where abuse and neglect exist. Both federal and state laws require educational, health and social service personnel (mandated reporters) to report suspected child abuse or neglect to a designated child protective service agency. However, the evidence from previous research is that mandated reporters report considerably fewer cases of suspected maltreatment than they actually identify.

Four categories of variables have been identified in the literature as affecting whether or not a mandated reporter reports a case of child maltreatment. Those categories are: 1) the worker's understanding of the law, 2) the worker's professional experience and training, 3) the organizational structure and culture of the worker's work place, and 4) the personal characteristics of the worker. The primary hypothesis is that the likelihood of reporting child abuse and neglect is a function of the combination of legal, experiential, organizational and personal factors.

During the summer of 2001, a survey was mailed to human service workers who are members of the New York City Chapter of the National Association of Social Workers. Approximately 2000 individuals, working in settings such as schools, hospitals, counseling programs and day care centers, responded. The researcher and a York College

research assistant are analyzing the information from those survey questionnaires. Findings thus far show that workers are not clear in their understanding of the law; and workers are more likely to report maltreatment when their agencies have guidelines regarding the kinds of situations to report.

Dr. Ashton's research is funded by an external grant from the National Institutes of Health (NIH MBRS/SCORE), at a level of \$118,000 for three years.

### ***Higher Education and Nonstandard Workers***

Dr. Kathleen Barker studies the social and psychological issues faced by nonstandard workers. In the United States, 3 out of 10 workers are employed in nonstandard jobs, that is, in jobs that are not permanent and/or full-time. Academic workers in higher education have a much higher probability (5 out of 10) of being employed in nonstandard jobs than a U.S. citizen. Dr. Barker's recent research has focused on two major areas: employment decisions in academe and national employment trends of academics in standard and nonstandard positions.

Prior research has shown that academics working in less than permanent positions experience a penalty for such experience from employers. This thesis was tested in PSC-CUNY grant-funded research that entailed studying chairpersons in Psychology and English Departments. The survey was experimental in nature, testing three different factors. The results will determine the effects of type of job opening (standard, nonstandard), quality of recommendations (good, good/ambiguous), and work experi-

ence (tenure-track, non-tenure track and adjunct) on department chair's evaluations of job candidates.

The second project involves the analysis of a U.S. Department of Education data set (NSOPF) for analyzing standard and nonstandard labor in academe and has been partly funded by NSF/NCES and the Economic Policy Institute. This research will examine a number of higher education employment trends from the Fall of 1992 to the Fall of 1998 with the primary goal being an analysis of trends and outcomes in the employment of nonstandard faculty in higher education.

### ***The Role of Diminutives in Russian Gender and Case Learning***

Professor Brooks and her collaborator, Dr. Vera Kempe from SUNY Oswego, study the acquisition of languages with grammars very different from English, in particular Russian. They have received funding from NATO to enable them to collaborate with investigators at the Institute of Philology, Department of Theoretical and Applied Linguistics, at Moscow State University (Russia) and from the Spencer Foundation for research on "The Role of Diminutives in Russian Gender and Case Learning."

The main objective of this project is to explore the effects of systematic structuring of language input on language learning. The findings will improve understanding of second language learning and may help educators identify the learning styles of their students and tailor instruction to students' specific needs.

It has been observed that diminutives are a typical feature of child-directed speech (CDS) regis-

ters. Moreover, it seems that the frequency of diminutives in CDS varies from language to language. The speculation is that the frequency of diminutives in CDS of a language depends, among other things, on the extent to which diminutives regularize and simplify the grammar of that language. Russian is known for the pervasiveness of diminutivization in CDS, which can be attributed to their regularizing effect. The findings obtained in the project will lay the groundwork for a crosslinguistic comparison of the effects of diminutivization on language learning.

#### ***The Lost Museum-Exploring Antebellum American Life and Culture***

The Graduate Center's American Social History Project/Center for Media and Learning (ASHP/CML) received a grant of \$130,000 from the National Endowment for the Humanities to fund the production of The Lost Museum-Exploring Antebellum American Life and Culture, a Web based interactive re-creation of P.T. Barnum's American Museum circa 1865. The Lost Museum combines narrative, spatial investigation, documentation, and pedagogical strategies to convey the social, cultural, and political history of antebellum and Civil War America. Barnum's American Museum, the pre-eminent popular institution of mid-nineteenth century America, was a uniquely influential site that both reflected and refracted the compromises, accommodations, and conflicts of antebellum and Civil War America.

The Lost Museum ([www.lost-museum.cuny.edu](http://www.lost-museum.cuny.edu)) is made up of a digital three-dimensional reconstruc-

tion of the American Museum, based on the existing historical record of descriptions and illustrations, and an archive of primary and secondary source materials. Specific rooms in the re-created museum broadly embody the site's major humanities themes, including slavery and the anti-slavery movement, immigration and the creation of white working-class identities, temperance and industrial morality movements, urbanization and middle-class formation, gender ideologies, sectional tensions, and the rise of commercial popular entertainment. The Archive provides historical perspective on these themes via a range of primary and secondary documents that link the past with the present and the Museum's details with larger themes in American history.

The Lost Museum was produced by the Center for Media and Learning/American Social History Project and the New Media Lab at the Graduate Center in collaboration with the Center for History and New Media at George Mason University. ASHP/CML received a planning grant from the Public Programs Division of NEH in 1996 to produce the prototype for The Lost Museum.

#### ***Visionlearning: An Interdisciplinary Science Education Web Portal***

In 1998, Professor Carpi began experimenting with the use of Web-based teaching materials for improving science education. The resource that was created, The Natural Science Pages (<http://web.jjay.cuny.edu/~acarpi/NSC/index.htm>) proved highly effective at increasing course performance and student interest in the sciences.

Using evaluations and feedback collected during this project, Professor Carpi launched a public, interdisciplinary science education Web portal, Visionlearning, in 2000 with support from the National Science Foundation in the amount of \$75,000.

**Visionlearning** (<http://www.visionlearning.com>) is an education resource that offers a library of bilingual (English and Spanish) teaching modules for introductory science courses. These modules provide text-based explanations of core scientific concepts, a pop-up glossary and interactive simulations designed to help students learn the core subject matter. The portal contains a section that allows individual instructors to customize a Web classroom so that it includes any of the lessons as well as a personalized course syllabus, email address and other relevant matters.

Professor Carpi is an Assistant Professor of Environmental Toxicology in the Department of Sciences at John Jay College of the City University of New York. He also helped coordinate the design and launch of the HETS Virtual Place, an online cooperative for Hispanic education.

#### ***Database of Classical Bibliography***

The Database of Classical Bibliography (DCB) is a comprehensive, computer database of classical bibliography featuring the *Année Philologique* (Aph), the international bibliography of record for the field of classical studies. It makes information on the ancient world easily accessible, benefiting everyone from the most sophisticated scholar to the beginning student, in all humanistic disciplines that trace their origins to ancient Greece and Rome, including

literature, language, history, philosophy, religion, mythology and folklore, art, archaeology, and music.

In December, 1997 the DCB published its second CD-ROM (DCB. v2) containing 248-399 bibliographical records from volumes 45-60 of the *Aph*, covering the years 1974-1989. In addition to its 111 MBs of data, DCB. v2 was equipped with customized retrieval software for Windows and Macintosh that supports searching via nineteen indexes in both Roman and Greek alphabets, Boolean and range searching, a choice of three output formats, and resources for copying, downloading, printing and revisiting results. With a unique facility integrating indexes from the TLG's Canon of Greek Authors and Works, searches can also be organized by Greek genre, Greek geographical origin and ancient date.

Future enhancements will place the DCB on the internet, where it will be combined with a bibliography digitized in Paris. The website will have 31 years of classical bibliography from 1969-1999 and it will be updated annually with older and newer bibliography.

The DCB has received over \$2,000,000 in grants, largely from the National Endowment for the Humanities (NEH), with matching grants from major foundations including the Kress, Delmas, Getty, Gould and Mellon Foundations.

***Journal of Research in Crime  
and Justice***

Professor Todd Clear received a grant from the National Institute of Justice in the amount of \$112,951 for a new journal devoted to

policy discussions of criminology research findings. The National Institute of Justice provided funding to make criminological research findings more useful for policy makers and users. Its central role is to strengthen the role of research findings in the formulation of crime and justice policy. The inaugural issue of *Criminology & Public Policy* was published in November 2001. And the second issue is scheduled for publication in Spring 2002. The journal has since become an official publication of the American Society of Criminology.

A 1971 graduate from Anderson College, Dr. Clear earned his Ph.D. in Criminal Justice from the State University of New York. Todd Clear is a Distinguished Professor for Law and Police Science, at John Jay College of Criminal Justice since 1999.

### ***Laser and Fiber Optics Academy***

Most Tuesdays at 3 P.M., nine young women and sixteen young men from over a dozen schools come to Queensborough Community College to learn and experiment at the Laser and Fiber Optics Academy. The Academy allows high school students to acquire marketable skills related to lasers and fiber optics. The college's laboratory is equipped with a variety of high tech instruments (funded by a grant under the Carl A. Perkins Vocational and Technical Education Acts and several from the National Science Foundation). Candidates must request admission and be recommended by their schools.

Several federally-mandated criteria must also be met. In the first half of the Academy, students concentrate on skills related to fiber

optics. Under the tutelage of project director, Dr. Don Engelberg, students manufacture a fiber optic cable and inspect its end with a microscope attached to a television screen. Once satisfied with the appearance of the ends, they measure loss of light using an optical power meter. Students also spend several sessions learning how to use an optical time-domain reflectometer (optical radar) and to interpret the results.

The second half of the Academy is devoted to lasers and related skills. Students learn how to align optical beams and deal with many optical elements used in laser systems. They measure signals using sophisticated digital storage oscilloscopes capable of taking a billion measurements every second and displaying them on a screen or sending them to a computer. Students work with several types of lasers.

Goals are to train students in useful skills, expose them to an exciting high technology field, and encourage them to train for careers related to this field at whatever level they wish.

### ***NSF Careers Award***

Dr. Paul Gottlieb, Assistant Professor of Medicine in the Department of Microbiology and Immunology at the Sophie Davis School of Biomedical Education/CUNY Medical School at CCNY, has won the highly prestigious Career Award from the National Science Foundation (NSF) for his research.

Dr. Gottlieb's award, in the amount of \$400,000 over four years, will support the development of a program for integrated study and

research in virology. The main thrust of Dr. Gottlieb's research will be to develop a virology program for undergraduate, graduate, advanced high school, and medical students while integrating teaching with active student research in the molecular biology of viruses.

The research will emphasize two scientific projects that demonstrate the fundamentals of virological research. One project will use the bacterial virus family Cystoviridae as a safe model to understand the mechanism of replication within the Reoviridae family. The Group A rotaviruses of the Reoviridae are a leading cause of severe dehydration diarrhea in children under five, resulting in nearly one million deaths worldwide. The second area of research will introduce students to a human pathological agent's mechanistic basis and familiarize them with the scientific inquiries needed to establish a disease's relationship to an infectious agent.

A graduate of SUNY-Stonybrook and The Graduate School of the City University of New York, where he received his Ph.D. in Biology, Dr. Gottlieb is also a co-Principal Investigator with Dr. Linda Spatz (Sophie Davis School) for a two-year \$100,000 grant received from the National Institutes of Health. The grant supports their joint work in the viral etiology of systemic lupus erythematosus and Epstein-Barr virus.

Students should be exposed to the community setting as an arena to learn and practice their skills. In 1996 the faculty from the Department of Nursing at Queensborough Community College began a partnership with the Visiting Nurse Service of New York to provide graduating senior nursing students with a community nursing experience.

Professor Karin Gapper is now expanding that community-based curriculum into the entire four-semester nursing program. The outcome of this multi-year project will be to equip graduates with the skills necessary to provide care to clients in a community setting as well as the traditional hospital setting. The plan methodically moves through the present sequence of courses adding community theory as well as additional laboratory skills and clinical experience that are community based. Emphasis is placed on health promotion and disease prevention as well as the role of the professional nurse as a teacher.

A Carl D. Perkins Vocational and Technical Education Act (VATEA) grant provided the funding to construct a community nursing laboratory. First semester students not only utilized it to assess a home for safety issues but all the basic skills taught in that beginning semester now have a community component added to the hospital based skill. Each semester uses the community laboratory to demonstrate the home assessment component and practice skills that accompany the relevant theory.

It is expected that as students learn to move from the acute care setting to one in the community, the transition into the same arena as graduates will be facilitated. As a result of this grant/project, it is anticipated that graduates of the Nursing Department of Queensborough Community College will be able to seek entry-level community nursing positions.

### *A Comprehensive Cognitive Skills Academy for the Associate Degree Student*

For his grant involving self-regulatory learning (SRL), Professor Hudesman won a three year FIPSE (Fund for the Improvement of Post-Secondary Education) grant in the amount of half a million dollars.

Self-regulatory learning is part of the learning process. This cognitive skill, which serves as a management system, allows students to organize, implement, and generalize study and academic skills. The SRL process teaches students how to understand, monitor and manage the learning process. The process includes several stages: 1. self-assessing performance, 2. choosing and implementing learning strategies, and 3. monitoring their effectiveness based upon some measure of academic performance. Extensive research on learning has demonstrated that student mastery of these processes is highly correlated with academic achievement.

Professor Hudesman has been developing a model of SLR learning that has been successfully used with incoming students enrolled in remedial mathematics and writing, as well as with students in first level college mathematics and writing courses.

SLR holds promise to transform the way in which students perceive the learning process. They shift from attributing their academic outcomes from something that happens "to them" to an orientation in which they learn to understand and control the mechanisms that influence the learning process.

This project is an outgrowth of a four-year collaboration with Barry Zimmerman and Bert Flugman of The Graduate Center/CUNY.

### **Substance Abuse Prevention**

In 1998, Dr. Jacobs and the Research and Evaluation Center secured the largest award ever given to CUNY (\$19 million over five years). The contract was awarded by the Center for Substance Abuse Prevention (CSAP), under the auspices of the Substance Abuse and Mental Health Services Administration (SAMHSA), which is a department in the U.S. Department of Health and Human Services (DHHS).

The National Center for the Advancement of Prevention (NCAP) directly supports CSAP's mission to bring effective substance abuse prevention to every community, specializing in identifying effective programs and practices that advance the science base of prevention. NCAP translates prevention knowledge into useful and timely products, promoting the adoption and informed adaptation of effective programs along with outcome accountability. NCAP's products serve the full spectrum of CSAP target audiences, including all states, intermediary national organizations, partnerships, and collaborative groups.

Working with a team of nationally respected social scientists, Dr. Jacobs and NCAP have created several products aimed at the substance abuse prevention practitioner. These products are regularly updated and presented at conferences around the nation. These products include "Achieving Outcomes: A Practitioner's Guide to Effective Prevention" (formerly known as Getting to Outcomes); "The National Registry of Effective Prevention Programs (NREPP)"; "Finding the Balance: Program Fidelity and Adaptation in Substance Abuse

"Prevention" and thirty "State of the Science" papers accepted for publication in "The Journal of Primary Prevention" and "Prevention Science".

Nancy Jacobs earned her Ph.D. in Political Science at Columbia University. She has been the Executive Director of the Research Evaluation Center since 1980.

### **Internal Migration in China**

The specific aims of Professor Liang's NIH/NICHD sponsored project are to: systematically measure internal migration in China during the period of 1982-1995; test hypotheses derived from the market transition theory and network theory of migration; and examine international migration from China. His project mainly uses data from three sources: the 1987 China 1% Populations Sample Survey, the 1% Sample of the 1990 China Population Census, and the 1995 China 1% Population Sample Survey.

Professor Liang has focused specifically on the following research topics. One paper examined patterns of migration in China during 1982-1995. The study of migration during this period is very important because it was during this time that China's transition to a market oriented economy was accelerating. Several patterns are evident : 1) increasing number of temporary migrants (migrants without local household registration), 2) increasing importance of long-distance migration, 3) increasing concentration of migrants in the coastal region, and 4) strong preference among migrants to choose cities as destinations.

### **The Shape and Circuitry of Neurons in the Retina**

The mammalian retina is a highly organized sensory structure to detect light and to encode a variety of visual signals in ways that can be understood by the brain. Visual cues related to brightness and contrast, position, color, and movement activate specific circuits within the retina. Underlying these circuits are about 50 different types of cells that differ in shape, stratification, and connections. We have learned a great deal about the types of photoreceptors, amacrine cells and ganglion cells in the retina, but a significant gap still exists in our understanding of the types of bipolar cells and how they synapse with amacrine and ganglion cells within the inner plexiform layer.

The goal of the current project is to study the bipolar cells types in the retina from a random sample of intracellularly filled cells. Once cell types have been determined morphologically, it will be possible to compute their relative frequencies. Once the types and frequencies of the bipolar cells have been determined, we can begin to investigate the circuits made between bipolar, amacrine and ganglion cells in the inner retina.

Dr. MacNeil earned an A.B. from Smith College and a Ph.D. in Anatomy and Neurobiology from the Boston University School of Medicine. Her research is funded by a PSC-CUNY grant and an external grant from the National Institutes of Health (NIH MBRS/SCORE) for \$385,000 for three years.

### ***Seeking a New Cure for an Old Scourge***

Since January 1999, researchers at Brooklyn College headed by Dr. Richard Magliozzo have been researching antibiotic action, particularly against the microorganism *Mycobacterium tuberculosis*, which causes tuberculosis. Funded by the National Institute of Allergy and Infectious Diseases of the National Institutes of Health, with additional support provided by the PSC-CUNY Research Awards Program, Dr. Magliozzo's research efforts address the function of the antibiotic isoniazid. The goal of the research is to achieve a deeper understanding of tuberculosis bacteria, how antibiotics work to kill the bacteria and how the bacteria become resistant to antibiotics. In a separate study in the same laboratories, iron metabolism in tuberculosis is being probed. This research is being funded by the Heiser Program for Research in Tuberculosis and Leprosy through a postdoctoral fellowship awarded to Brooklyn College's research associate Dr. Sheng Wei Yu. It is hoped that these joint efforts will lead to the development of new treatment methods and a vaccine that may eradicate the disease. Dr. Magliozzo and his current team of researchers Drs. Salem Chouchane, Sheng Wei Yu, and Stefania Girotto are part of the worldwide efforts toward stopping TB.

A 1974 graduate of Hunter College, Dr. Magliozzo earned a Ph.D. in biochemistry from the Graduate School and University Center of CUNY in 1981.

### ***The Second Generation in Metropolitan New York***

It is widely understood that another great migration has reshaped the contours of American society since 1965. Today, one in ten persons in the U.S. is foreign born, a figure that rises to more than one-third in New York City and Los Angeles County. Great concern and widespread debate have emerged around whether this surge of new immigrants has been good or bad for the U.S. economy, the quality of neighborhood life, the labor market prospects of the native minority poor, intergroup relations, the cost of government services, and our civic culture.

A century ago, industrial expansions and urbanization provided immigrants and their children with gradual but steady intergenerational mobility, helped by trade unions, political parties, and religious institutions. The cutting off of immigration after 1924 also promoted absorption. While not without conflict, the historical records judges their inclusion into American society to have been an unqualified success.

Conditions could hardly be more different today. The new immigrants are entering a deindustrializing

economy marked by racial division, economic uncertainty, stagnant earning, and growing inequality. They face more racial and ethnic inequality with less help from unions, political parties, and churches. Downward mobility is a real prospect for groups lacking resources, especially those for whom incorporation means joining a racial minority group. On the other hand, immigrant communities are obviously vibrant and striving, many immigrant groups do have significant resources, and many of their children have achieved an impressive degree of success. They join a broader and more diverse American culture. So what will be the outcome of the current wave of immigrations? The answer will be found in the life trajectories of their children, the new second generation.

This study examines schooling, employment, and social incorporation among five groups of young adult children of post-1965 immigrants living in the New York metropolitan area and compares them to three native born groups. It includes those whose parents come from the English-speaking Caribbean, Chinese from the mainland and elsewhere, the Dominican Republic, the South American countries of Colombia, Peru and Ecuador, and the former Soviet Union.

***Health Force: Teaching South Bronx Kids to be Health Educators***

Health Force is the largest community health promotion and education organization in New York City which is based on peer education. It has 40 paid staff and 60 volunteer peer educators who have undergone an intensive two-month, 4-day week training to prepare them to provide health education, support and prevention services to 3,000 clients a year.

As the organization has grown, it has become increasingly clear that to effectively fight the health problems in the Bronx teenagers and kids must be involved. The South Bronx has the highest-per-population rate of children and teens being orphaned by AIDS of any borough and one of the highest childhood asthma rates in the nation.

Health Force's first project with kids is the Jr. Peer Educator and Children's Mentoring Project. In this program, which appears to be unique in the nation, older teenagers (most of whom are from HIV-affected homes) are trained to become mentors for younger children whose parents have AIDS. Throughout the year, the kids routinely go on cultural and educational outings and every Saturday they have a support group run by teens for the younger kids. This "kid" support group provides a very safe place where children can discuss their problems and fears. Meanwhile, the teenagers, many of whom are quite isolated, learn that they have an important role in the community and that they can still go forward, even though they have problems at home. The Health Force mentoring program was named one of 16 outstanding mentoring programs in the United States by the National Mentoring Partnership and is currently under-

ing a 5-year evaluation sponsored by the National Institute of Child Health and Human Development.

Two years ago, Health Force began training teenagers with asthma to work with younger children with asthma during the summer months. The teenagers have proven to be among the best and most enthusiastic asthma educators imaginable; they even make home visits to help parents better understand how to control a child's asthma. Interestingly, during their summer training, when, among other things, they are taught to do deep breathing exercises on a regular basis, the teenagers' own lung capacity expands by an average of about 20% and their own asthma also decreases significantly.

***First Documented Extinction of a Primate In At Least Two Centuries***

The first documented case of a primate's extinction in at least two centuries has been reported by a team of scientists - led by Hunter College anthropologist John Oates.

The vanished primate, Miss Waldron's red colobus, was a red and black monkey weighing up to 20 pounds that lived in the rain forest canopy of Ghana and the Ivory Coast. The animal was named for the companion of Willoughby P. Lowe, a collector for British museums who "discovered" the primate in 1933. Whether Miss Waldron's constituted a species or subspecies is an unsettled question among scientists.

"The extinction of Miss Waldron's red colobus may be the first obvious manifestation of an extinction spasm that will soon affect other large animals," says Professor Oates. "Hunting by humans appears to be the ultimate cause of the extinction," he wrote in the peer-reviewed

journal with co-authors Micahel Abedi-Lartey, Ghana Department of Wildlife; Scott McGraw, Ohio State University; Tom Strushsaker, Duke University; and George Whitesides, Guilford Technical Community College. The monkey had been listed as endangered by the World Conservation Union.

The scientists have two lines of evidence that Miss Waldron's red colobus is extinct. First, they found no firm records of any sightings since 1978. Second, between 1993 and 1999, Professor Oates and his colleagues surveyed 19 forest areas in the monkey's known habitat and neither saw nor heard any red colobus.

A specialist in primatology and biological anthropology, Dr. Oates is a professor of anthropology at Hunter College. He most recently gained national recognition in 1997 for his co-publication in *Nature* of the discovery of a possible new subspecies of chimpanzee.

***The Interaction of Language and Dialect Contact: Variable Expression of Spanish Subject Pronouns in Six Dialects in New York City***

The Graduate Center's newly established Research Institute for the Study of Language in Urban Society (RISLUS) received a \$310,000 grant from the National Science Foundation to study whether Spanish dialects in New York City are undergoing leveling (becoming more like one another) or hyperdifferentiation (stressing the features that keep them apart) and/or whether they are converging with English. Leveling may indicate the rise of a NYC Spanish, suggestive of

# City University of New York Faculty Researchers, Centers and Institutes

## Highlights

a new NYC Latin identity; hyperdifferentiation may suggest the emergence of transnational identities which tie immigrants and language minorities to their distant communities of origin more than to speakers of other dialects in the immigrant setting.

Titled, The Interaction of Language and Dialect Contact: Variable Expression of Spanish Subject Pronouns in Six Spanish Dialect in New York City, the project is headed by Professor Ricardo Otheguy of The Graduate Center's Ph.D. Programs in Linguistics and Hispanic and Luso-Brazilian Literatures and director of RISLUS. The research is being conducted in collaboration with Professor Ana Celia Zentella of the University of California at San Diego, with the active participation of doctoral students at CUNY, and in consultation with Professor Gregory Guy of York University in Toronto, Canada.

The project is the first to study a variable feature of Spanish (a) in a major urban center in the Northeast, (b) with a large, multi-dialectal sample of speakers in contact with each other and with speakers of English, and (c) using state-of-the-art statistical techniques. An important benefit of the project will be the training of Latino doctoral students, who are underrepresented in Linguistics in the U.S.

gram targets disadvantaged college students who are homebound and seeks to increase retention, graduation and transfer rates. It is the only program of its kind in the U.S..

One hundred and five students with disabilities from the greater metropolitan area will be enrolled in a broad range of degree and certificate programs. Severely disabled individuals who are high school graduates and confined to their homes or hospitals are eligible, as are a small number of disabled students who are able to function on campus but who require academic support services in order to succeed in college. Students' academic success will be monitored by counselors who coordinate instructional and non-academic support services for the participants. These include tutoring, peer mentoring, home visiting, proctoring, technical assistance, cultural enrichment and opportunities for socialization.

Two thirds of the students participating in the program, will be low income, many on fixed incomes (SSD) and over 80% are expected to be first generation. Homebound students are linked to ongoing classes in real time through telephone and/or computer or attend classes on-line and/or through CUNY TV. Although it is possible for students to graduate without ever setting foot on the campus, students are encouraged to do so to meet their instructors, classmates and support staff.

Recent improvements in telecommunication technology have made it easier for students to participate in the Homebound Program. Through Perkins grants (NYSED), students are directly linked to the classroom via the Internet, making it possible for them to share files with professors and see what is being written on the blackboard in real time. Professors now have the ability to control their students computers remotely.

Over the years, the Homebound Program has garnered national recognition from both the disability and higher education commu-

nities (AHEAD FIPSE, Dissemination Project). High rates of course completion, outstanding retention and graduation rates and increasing number of students transferring to four year institutions or becoming employed have been past hallmarks of its success.

Professor Penrod's current research includes a series of NSF-supported projects totaling \$260,000. They include a longitudinal study of the impact of the U.S. Supreme Court's Daubert decision changing evidence law governing the admissibility of expert scientific and technical testimony, and a meta-analytic survey of eyewitness research designed to summarize findings from twenty-five years of experimental research examining factors that influence eyewitness.

Professor Penrod's research and writing have been focused on decision-making in legal contexts. He has written extensively about the jury including research on the effects of jury size and decision rules on jury decisionmaking, death penalty decisionmaking, juror's use of probabilistic and hearsay evidence, comprehension of legal instructions, and the impact of extra-legal influences such as pretrial publicity, joinder of charges, the effects of cameras in the courtroom, and the effects of juror questioning of witnesses on jury performance. His research and writing about eyewitness evidence has studied factors that reduce eyewitness reliability, interview and lineup procedures that may enhance eyewitness performance, child witness, jury assessments of eyewitness evidence, the relationship between eyewitness confidence and eyewitness accuracy and the effects of eyewitness expert testimony on jury decisionmaking.

**Experimental and Applied Behavior Analysis**

Prof. Ploog's two main areas of research are: Experimental Analysis of Behavior (EAB) and Applied Behavior Analysis (ABA). These two fields, which deal with the study of attention processes, are connected.

In EAB, Ploog develops models that allow him to quantify attention processes. He uses pigeons as subjects because they are hearty and easy-to-maintain animals with a long life span (up to 10-15 years). In addition, pigeons possess color vision that is functionally similar to human vision (even though- neuroanatomically speaking- the human and pigeon visual systems are quite different). One model presents different choices, signaled by visual stimuli, to the pigeon. Interestingly, if water versus food is signaled as the choice, the pigeon will move its beak differentially, depending on whether it is responding to the water or to the food signal. In a way, the pigeon's behavior is telling us what it is attending to and what outcome it expects.

In ABA, Ploog studies so-called stimulus overselectivity, which is quite common in individuals with autism. Stimulus-overselectivity refers to a behavioral phenomenon where the afflicted child will only pay attention to a limited number of stimuli. This may explain a number of deficits that are common in autism, such as deficient language and social behavior (by attending to only the auditory aspects of a spoken word but not to the meaning of what is being

said, for example).

Ploog's work in EAB has been funded primarily by PSC-CUNY grants; the work in ABA is currently funded by the Cure Autism Now (CAN) Foundation. CAN provided \$40,000 for the first year and, contingent on a progress report, an additional \$40,000 for the second year.

**The Hominidae: Behavior and Ecology**

Professor Tom Plummer's research focuses on reconstructing the behavior and ecology of the members of our biological family, the Hominidae. *Homo sapiens* (modern humanity) is the only extant species within the Hominidae. A much greater diversity of hominids, existed in the past. Some of these species were ancestral to us, while many others were "cousins" that went extinct without issue.

Paleoanthropologists strive to reconstruct the world of our extinct relatives, to better understand how they behaved and provide insight about the deep history of humankind. What is clearly documented is that there was more than one way to be a hominid, and our evolutionary history was not a neat, directed sequence with modern humans as a final goal. Professor Plummer's current research emphasis is on Plio-Pleistocene (c. 1.5–3.0 million years ago) hominid paleoecology and behavior. The Plio-Pleistocene is a particularly interesting time interval, which witnessed the first appearances of the genus *Homo* and *Paranthropus* (the robust australopithecines), the earliest archeological sites and the first clear evidence of hominid utilization of large mammal tissue. The production of stone tools and butchery of large mammals was a

major adaptive shift in human evolution, often attributed to early members of our genus. But much still needs to be learned about the life ways of the early toolmakers.

The human brain, in conjunction with the eyes and the inner ear, does an excellent job of keeping us from falling flat on our faces when we walk. But it's not a simple function, as research by Distinguished Professor of Computer and Information Science Theodore Raphan has shown. A \$2 million grant from the National Institutes of Health will fund a study entitled "Vestibular Mechanisms in the Dynamics of Locomotion" over the next five years.

"It may sound simple, but nobody understands why some people are unstable when they walk or why they fall. This is especially so in the elderly population," says Raphan, who will collaborate with the Mount Sinai School of Medicine on the research. "We are optimistic that our work will shed light on the relationships among the balance system (the vestibular system), vision, and locomotion, and how such diseases of the brain as Parkinson's disease or strokes affect walking. The research will lead to more effective rehabilitative procedures to alleviate the symptoms of these diseases."

Dr. Raphan is especially interested in how the body reacts to the weightlessness encountered in space flight. A \$750,000 grant from NASA will permit Raphan and his colleagues at Harvard, MIT, and Boston University to research "Advanced Techniques for Assessment of Postural and Locomotor Ataxia, Spatial Orientation, and Gaze Stability." In addition, Dr. Raphan has received NIH grants totaling more than \$1 million to study and model the underlying neural mechanism that govern our ability to maintain spatial orientation while moving.

### ***Exposure to Recurring Community Violence and its Consequences***

The objective of this research is to understand the impact of recurring community violence on the psychosocial functioning of urban adolescents. Understanding these dynamics is a prerequisite for developing effective intervention strategies to minimize the impact of such exposure on this age group.

Recurring community violence, "street" violence, is being examined in terms of its potential causes, e.g., community poverty and family structure and its potential consequences, e.g., psychological stress, poor school performance, and common minor but debilitating illnesses. Exposure to community violence is also being studied in terms of the potential strengths people have that may moderate the effect of exposure to community violence. These strengths include the presence of a caring adult, a spiritual/religious orientation, and a sense of humor.

Thus far, data has been collected from approximately 2000 adolescents living in all the five boroughs of NYC. Among the many findings are: it is almost impossible to predict who will be exposed to community violence, exposure to community violence causes psychological distress, witnessing violence is as bad as being a victim, and the presence of a caring adult reduces the negative effect of exposure to community violence.

### **Ecological and Social Change In Newfoundland Fishing Villages**

In the late 1980s, advances in fishing technology and increased investment in fishing led to widespread prosperity in the fishing villages of Newfoundland. In the 1990s, the stock became depleted and ultimately the majority of rural Newfoundlanders were left with no full-time employment prospects.

This research project, based on ethnographic field work in northeast Newfoundland since 1998, describes and analyzes severe economic and social devastation and how people come to understand and cope with their changing situation. It pays particular attention to elements of the situation that do not lead to clear courses of action. The project also focuses upon the increasing differences in well-being within and between families, and the massive outmigration that is increasingly diminishing the long-term viability of small communities. Both for the people who can, and those who must, remain, social life becomes more complex to negotiate as local schools, stores, churches and services close,

and increasing numbers of families are fragmented.

This research is part of a larger project that compares the situation in Newfoundland to the situation in rural areas of the southeastern United States, where African American and Native American communities, whose economies had come to depend upon a mixture of small scale agriculture and textile employment, now face similar issues of sudden and massive economic and social dislocation.

The southeastern U.S. portion of this project has been funded by several PSC-CUNY grants, and the Newfoundland portion of the research was initially supported by the National Endowment for the Humanities and Memorial University of Newfoundland, prior to support from the National Science Foundation /Office of Polar Program.

He directs the research project at the Brooklyn College Center for Auditory Research.

The recipient of many awards and honors, Dr. Silman was presented last October with the Medical of Humanitarian Service to Brazilian People by the Escola Paulista

Medicina, the medical school of the Universidade Federal de São Paulo, when he donated- and personally delivered- a case full of hearing aids to a local clinic. Twenty people including homemakers, bus drivers, students, and factory workers were fitted with the hearing aids and their lives were instantly changed.

In 2000, the American Academy of Audiology honored him with the Audiology Research Achievement Award for his insights into auditory function that have had a significant impact on the clinical practice of audiology. Dr. Silman was the first to identify and document the phenomenon of late-onset auditory deprivation from the lack of amplification in hearing-impaired adults and children. His findings have led to a broader understanding of auditory deprivation.

Project Ascent/McNair has been in operation at The Graduate Center since 1993. Housed at the Center for Advanced Study in Education, the project is funded by the U.S. Department of Education through the Ronald E. McNair Postbaccalaureate Achievement Program, receiving in fiscal year 2001 \$239,917. It is one of approximately 100 McNair programs in operation at colleges and universities across the country.

The purpose of Project Ascent/McNair is to promote the entrance into doctoral study of students from historically underrepresented groups, including low-income first-generation college attendees.

At The Graduate Center, Project Ascend/McNair offers eligible CUNY undergraduates from the senior colleges opportunities to meet with doctoral faculty and students. Through a series of workshops, students learn about the process of applying to graduate school, researching financial aid sources, preparing competitive application packages, and studying for the GRE.

Each spring, eligible students are invited to apply for the Summer Research Fellowship, a stipend-supported, mentored research experience culminating in a research conference each fall. Twenty-five students are chosen for this intensive research training, conducted under the guidance of doctoral faculty mentors. In addition to regular meetings with mentors, fellowship students attend a series of writing workshops and faculty lectures held at The Graduate Center. At the end of the research period, fellows submit a paper for evaluation by mentors and Project staff. Each fellow also prepares a shorter paper or poster for

presentation at the research conference.

**Revitalizing Area Studies: Toward a Synthesis**

The Graduate Center's Center for Place, Culture, and Politics received a three-year, \$890,000 grant from the Ford Foundation to synthesize the Foundation's ambitious Crossing Borders project in Area Studies. The Graduate Center project, Revitalizing Area Studies: Toward a Synthesis, will draw together the new work accomplished under the Foundation's project, Crossing Borders: Revitalizing Area Studies, which was established in 1997 and represents an ambitious attempt to reorganize and re-invigorate Area Studies.

Funding almost 100 new projects, Crossing Borders, seeks to continue, deepen and broaden knowledge of specific places and areas, their cultures and languages, histories and geographies, politics, economics and social relations. It also raises the fundamental question of what constitutes an area and how specific knowledge derived in one context can be translated across geographical and disciplinary boundaries. Headed by Professor Neil Smith, the synthesis will produce a substantial volume spanning the scope of Area Studies revitalization.

Crossing Borders is putting that synthesis in place. Its overarching goal is to offer a clear intellectual basis from which a revitalized area studies can proceed, to convey an expansive statement of the promise and excitement this project holds, and to identify a range of approaches and methods that seem most promising for a new generation of area studies scholarship.

The grant gives the Center for Place, Culture, and Politics a leading role in the very closely watched scholarly endeavor of revitalizing Area Studies. Internally, it brings in postdoctoral researchers, provides fellowships for CUNY doctoral students, and, through a series of workshops and conferences, will bring an estimated 120 scholars to CUNY over the next three years. This work will have a multiplier effect in terms of new curricula and research initiatives across CUNY and will significantly enhance The Graduate Center's reputation as a center for international studies.

*Dynamics of Predator-Prey Behavior  
in the Antarctic Ocean*

Professor Veit received a four-year NSF Career Award in the amount of \$309,392 for his project on "Dynamics of Predator-Prey Behavior in the Antarctic Ocean." NSF's Career Program advocates integrating research and education environments. This premier program emphasizes the importance of early development of academic careers, and combines in a single program support for both research and education of the highest quality.

Prof. Veit's project exemplifies the NSF Career Program goals by combining research on the dynamics of seabirds that feed on Antarctic krill, with teaching of mathematical

modeling of foraging behavior and spatial statistics. As part of the project, groups of undergraduate students will travel to the Elephant Island area of the Antarctic to participate in collection of data on seabird abundance and behavior. Then they will learn a variety of research skills that will lead to the development of a model for predicting the impact upon the seabirds of future changes in krill stocks. Students will learn to apply basic mathematical reasoning and computer modeling to a real problem –that of determining how foraging choices made by seabirds can ultimately impact their reproductive success.

Prof. Veit's research is also supported by the Charles Blake Fund of the Nuttall Ornithological Club, the PSC CUNY Research Award Program, and the Research Foundation Equipment fund.

### ***The Seneca Village Project***

Using special radar and other instruments to explore beneath Central Park, a team of researchers and students will search for the remains of Seneca Village - one of the earliest settlements in New York City of African-Americans and Irish immigrants.

From 1825 to 1857, Seneca Village was one of the first significant communities of African-American property owners, and included several hundred residents living in simple houses, three churches and a school. Approximately two-thirds of those who lived there were of African descent, while the remainder were Europeans, mostly Irish who emigrated to escape the potato famine.

The houses in the village were purchased and demolished by the City of New York under eminent

domain laws in order to permit the building of Central Park. At the time, newspapers described the houses as "shanties" but they were, in fact, homes built in one of the few places African Americans were permitted to buy land. Since the right to vote was only permitted to property owners, the landowners may have bought the land in order to vote.

The team is headed by Cynthia Copeland, intermediate and high school programs coordinator for the New York Historical Society, Nan Rothschild, Professor of Anthropology at Barnard College, and Diana Wall, Professor of Anthropology at the City College of New York; and includes Roelof Versteef, a geophysicist from Lamont Doherty Earth Institute, Herbert Seignoret of City College and undergraduates from seven local colleges.

With funding from the National Science Foundation to The City College, as well as grants from Columbia University's Institutes for Social and Economic Theory and Research and The City University of New York, the teams will use historical documents along with ground penetrating radar and a device to measure electrical resistance of the soil to look for underground anomalies that according to the documents, could be man-made structures.

This is the first thorough survey of Seneca Village using this equipment, and if it discloses evidence of foundations, the team may seek permission from New York City to conduct an actual archeological dig.

**Quantum Magnets**

Distinguished Professor of Physics Eugene Chudnovsky is investigating properties of very small magnets. His research at Lehman College has been supported by grants from the National Science Foundation, U.S. Department of Energy, U.S. Department of Defense, and by private industry. Recent progress in measuring techniques has enabled scientists to manufacture and study magnets consisting of only a few atoms. This branch of physics has been named nanomagnetism, reflecting the nanometer size of the magnet. Relatively large magnets, as, for example, an arrow of a compass, have permanent locations of their north and south magnetic poles. In nanomagnets, the locations of the magnetic poles change in time at a rate that depends on the material and the size of the magnet. This effect, predicted theoretically by Dr. Chudnovsky, has been called magnetic quantum tunneling. It has significant technological implications. Firstly, it determines the minimal size of the magnetic memory unit and, thus, the ultimate density of the data storage in magnetic recording. Secondly, it opens the possibility of building a magnetic "qubit," an element of a quantum computer. Such a computer, which will be thousand times faster than most powerful modern computers, does not exist yet, but a large number of research laboratories are competing to build it first.

Professor Chudnovsky is currently working on the theory of quantum nanomagnets. He collaborates with experimentalists at City College, led by Distinguished Professor Myriam Sarachik, and with experimentalists at the University of

Barcelona, led by Professor Javier Tejada, who received an honorary doctorate from Lehman and is co-author with Dr. Chudnovsky of a book on "Macroscopic Quantum Tunneling" (Cambridge University Press).

In 2000-2001 Professor Chudnovsky published 17 research articles in the fields of magnetism and superconductivity that provide further insight into the physical properties of nanomagnets. In one of his most recent papers, he, together with Lehman research associate Dr. D. Garanin, suggested a theory of magnetic quantum tunneling in a reputed nanomagnet Mn-12. That theory has been subsequently confirmed by experiments in the laboratories of Professors Sarachik and Tejada (see popular article "New Vision of Magnetic Tunneling" in the January 2002 issue of a Physics World magazine). In 2000-2001, Dr. Chudnovsky was invited to give lectures on his research at the International Conference on Macroscopic Quantum Coherence and Computing in Naples, at the International Workshop on Nanoscale Superconductivity and Magnetism in Argonne, Illinois, at the International Meeting on Induced Cooperative Phenomena in Berkeley, California, at the International Chemical Congress in Honolulu, at the International Workshop on Tunneling in Barcelona, and at the International Conference on Nanoscience in Santa Barbara, California.

**Complexity Theory**

Victor Y. Pan, Distinguished Professor of Mathematics and Computer Science at Lehman College, continues to receive acco-

lades for his groundbreaking research. In 2001 he won the annual "Best Paper Award" from the Journal of Complexity, and his new book, Structured Matrices and Polynomials: Unified Superfast Algorithms, was published by Birkhäuser Springer (Boston and New York).

Dr. Pan's original thinking has led to significant breakthroughs in theoretical computer science and algebraic and numerical analysis. In his research, Dr. Pan focuses on numerical and algebraic algorithms, which are the backbone of present-day computations in the sciences, engineering, and communications. One of his permanent research objectives is the search for correlation among subjects and fields of his study, which should lead to unifying techniques for the design of more effective algorithms for various computational tasks. In other words, he is seeking "a few keys that will open many computational locks."

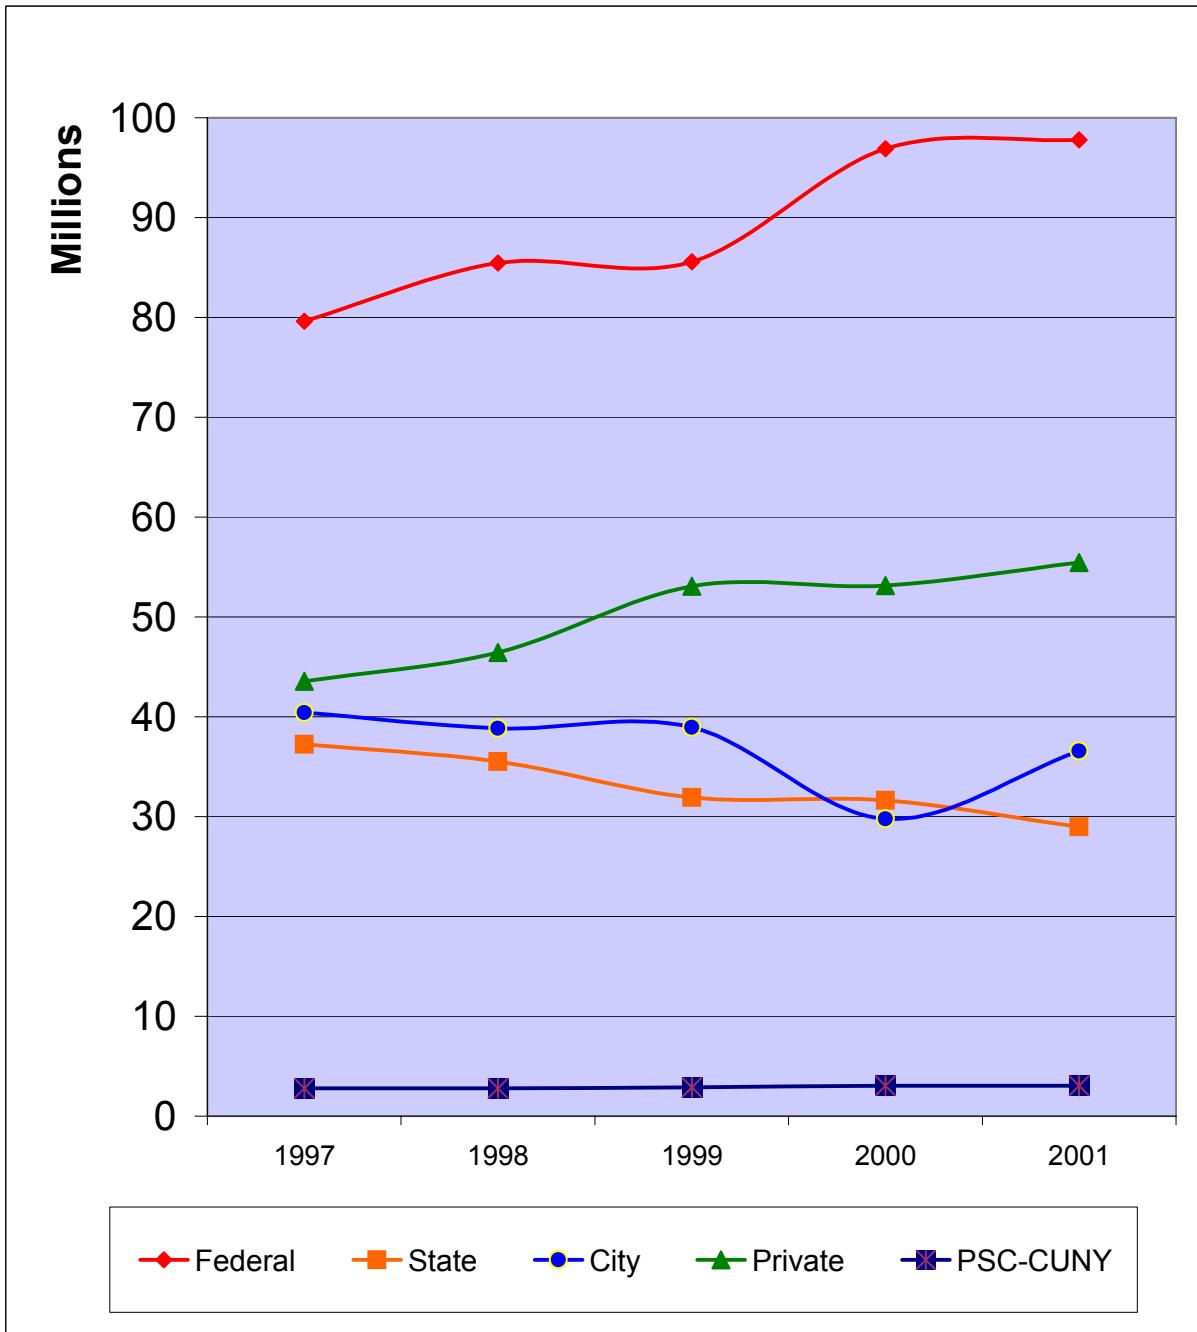

One of Dr. Pan's recent efforts in this direction involves devising new effective computational methods that combine the techniques of faster numerical computations with bounded precision and slower algebraic techniques for error-free symbolic computing.

Prior to joining Lehman College's Department of Mathematics and Computer Science in 1988, Dr. Pan was a Professor at the State University of New York at Albany. At various times in his career, he has worked as a Visiting Scientist at the IBM Research Center in Yorktown Heights and at the International Computer Science Institute in Berkeley, California. He has been a member of the Institute for Advanced Study in Princeton, New Jersey, and an Invited Scientist at a number of research institutions in Europe. He was a Senior Key Scientist at the Mathematical Science Research Institute in Berkeley and a Visiting Professor at several schools, including Columbia University, the University of Pisa in Italy, and Stanford University.

Dr. Pan emigrated to the United States in the late 1970s from the former Soviet Union. He earned his Ph.D. at Moscow University, where he also began his research, which he then continued at a research institute of the Soviet Academy of Science. During that time, he published a number of significant papers and became known informally as "polynomial Pan" for his pioneering work in the area of polynomial computations.

For the past 20 years, Dr. Pan's research has been supported by the National Science Foundation. He was also a consultant for AT&T Bell Laboratories and the General Electric Research and Development Center. His research findings have been published in three books and more than 200 articles in leading computer science and applied mathematics journals, as well as in the refereed proceedings of the most respected and competitive conferences in these fields. He is a frequent guest lecturer at meetings in computer science and computational math all over the world.

Financial Statements and Schedules

June 30, 2000 and 1999

(With Independent Auditors' Report Thereon)

345 Park Avenue  
New York, NY 10154

### **Independent Auditors' Report**

The Board of Directors  
Research Foundation of  
The City University of New York:

We have audited the accompanying balance sheets of the Research Foundation of The City University of New York (the Foundation) as of June 30, 2000 and 1999, and the related statements of activities and cash flows for the years then ended. These financial statements are the responsibility of the Foundation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Research Foundation of The City University of New York as of June 30, 2000 and 1999, and the changes in its net assets and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

Our audits were made for the purpose of forming an opinion on the basic financial statements of the Foundation taken as a whole. The supplementary information included in Schedules 1 through 6 is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information has been subjected to the auditing procedures applied in the audits of the basic financial statements and, in our opinion, is fairly stated in all material respects in relation to the basic financial statements taken as a whole.

**(1) Organization**

The Research Foundation of The City University of New York (the Foundation) is a private not-for-profit corporation chartered by the University of the State of New York. The Foundation is a separate legal entity from The City University of New York (the University) and in accordance with its charter, the purposes of the Foundation are as follows:

- Finance and otherwise facilitate the conduct of studies and research in any and all fields of intellectual inquiry of benefit to, and in keeping with, the educational purposes and objectives of the University and/or its constituent colleges, and to enter into contractual relationships appropriate to the purposes of the Foundation;
- Receive, hold and administer gifts or grants, and to act without profit as trustee of educational or charitable trusts of benefit to, and in keeping with, the educational purposes and objectives of the University;
- Provide prudent stewardship of research funds to satisfy the requirements of the State, the City, the sponsors and the University; and
- Assist in developing and increasing the facilities of the University to provide more extensive educational opportunities and service to its constituent colleges, students, faculties, staffs and alumni, and to the general public, by making and encouraging gifts, grants, contributions and donations of real and personal property to or for the benefit of the University.

**(2) Summary of Significant Accounting Policies**

**(a) Basis of Presentation**

The Foundation's financial statements are prepared on the accrual basis of accounting in accordance with standards established by the Financial Accounting Standards Board for external financial reporting by not-for-profit organizations. The financial statements focus on the Foundation as a whole and present balances and transactions according to existence or absence of donor-imposed restrictions. Accordingly, net assets of the Foundation and changes therein are classified and reported as follows:

**Unrestricted net assets** - Net assets that are not subject to donor-imposed restrictions. In addition, grants and contracts for the performance of certain services or functions are reported in the unrestricted net asset category.

**Temporarily restricted net assets** - Net assets subject to donor-imposed restrictions that will be met either by actions of the Foundation or the passage of time. The Foundation had no temporarily restricted net assets at June 30, 2000 and 1999.

THE CITY UNIVERSITY OF NEW YORK**

Notes to Financial Statements

June 30, 2000 and 1999

Permanently restricted net assets - Net assets subject to donor-imposed restrictions that stipulate that they be maintained permanently by the Foundation, but permit the Foundation to expend part or all of the income derived therefrom. The Foundation had no permanently restricted net assets at June 30, 2000 and 1999.

Revenues and gains and losses on investments and other assets are reported as changes in unrestricted net assets unless limited by explicit donor-imposed restrictions or by law. Expenses are reported as decreases in unrestricted net assets.

***(b) Grants and Contracts***

Revenue from grants and contracts, primarily for research, training and academic development programs, is generally recognized as earned, that is, as the related costs are incurred under the grant or contract agreements. Grants and contracts awarded to and accepted by the Foundation and various units of the University, as joint grantees, for the completion of designated projects in future years are reported as accounts receivable and deferred revenue.

Indirect costs recovered on grants and contracts are recorded at rates established by the Foundation with the Federal Government, or predetermined by the non-Federal sponsor. Indirect cost rates for government grants and contracts are subject to audit, and subsequent final settlements, if any, are recorded as current period adjustments. Management believes the impact of any future settlements to be immaterial to the financial statements.

***(c) Use of Estimates***

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingencies at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

***(d) Cash Equivalents***

Cash equivalents consist of money market accounts and securities purchased under agreement to resell with maturities of three months or less, except for such investments purchased by the Foundation's investment managers as part of their investment strategies.

Notes to Financial Statements

June 30, 2000 and 1999

**(e) *Investments***

Investments are reported at fair value based upon quoted market prices. Realized and unrealized gains and losses on investments are reflected in the accompanying statements of activities.

**(f) *Fixed Assets***

Furniture, fixtures and equipment and leasehold improvements are stated at cost. Depreciation of furniture, fixtures and equipment is computed on a straight-line basis over the estimated useful lives of the assets, ranging from five to seven years. Amortization of leasehold improvements is computed on a straight-line basis over the estimated useful lives of the assets, not to exceed the remaining life of the lease.

Equipment purchased by the Foundation on behalf of various units of the University from grant and contract funds is to be used in the project for which it was purchased and is not included in fixed assets in the accompanying balance sheets.

**(g) *Deposits Held in Custody for Others***

Deposits held in custody for others reflect those resources held on behalf of the individual colleges of the University (College Recoveries and Derived Accounts). These deposits are credited with indirect cost recoveries and released time recoveries for the colleges.

Released time recoveries represent personal service costs for individuals on the various colleges' payrolls who report effort under grants or contracts. When colleges replace an individual providing time and effort to sponsored projects, they do so by hiring, on the Foundation payroll, adjuncts whose personal service costs are reflected as deductions of deposits held in custody for others.

Indirect costs are considered recoveries of the specific colleges and, accordingly, are credited to deposits held in custody for others.

**(h) *Tax Status***

The Foundation has been exempt from Federal income taxes under the provisions of Section 501(c)(3) of the Internal Revenue Code.

**(3) Investments**

Investments held by the Foundation consist of the following at June 30, 2000 and 1999:

	2000		1999	
	<b>Fair value</b>	<b>Cost</b>	<b>Fair value</b>	<b>Cost</b>
U.S. Treasury bills	\$ 18,670,095	18,571,430	13,893,289	13,821,315

<b>Total</b>	<b>\$ 47,318,355</b>	<b>47,066,660</b>	<b>52,587,183</b>	<b>52,226,802</b>

**(4) Pension and Other Retirement Benefits**

Eligible employees of the Foundation and certain project personnel are covered under a defined contribution pension plan established with Teachers Insurance and Annuity Association (TIAA). The Foundation's contribution to the pension plan is based on specified percentages, ranging from 8% to 14%, of each employee's annual salary. Total pension expense for the years ended June 30, 2000 and 1999 was approximately \$7,554,000 and \$9,050,000, respectively. There are no unfunded past service costs.

In addition to providing pension benefits, the Foundation provides certain health care benefits to retired employees (including eligible dependents) who have a combination of age and years of service equal to 70 with a minimum age of 55 and at least ten years of continuous service. For the years ended June 30, 2000 and 1999, total claims paid for these benefits were approximately \$735,000 and \$450,000, respectively.

The Foundation accounts for postretirement medical and other nonpension benefits provided to retirees on an accrual basis during the period of their employment.

The following table sets forth the plan's funded status reconciled with the amounts shown in the Foundation's balance sheets as of June 30, 2000 and 1999:

	<b>2000</b>	<b>1999</b>
Benefit obligation	\$ (29,736,075)	(24,801,603)

Notes to Financial Statements

June 30, 2000 and 1999

Postretirement benefit costs for 2000 and 1999 included the following components:

	<b>2000</b>	<b>1999</b>
Service cost	\$ 2,974,938	2,369,976
Interest cost	1,655,005	1,481,920
Amortization of transition obligation over 22.8 years	757,413	757,413
Amortization of unrecognized net gain	(18,213)	—
Expected return on plan assets	<u>(133,033)</u>	<u>(84,947)</u>
Net periodic postretirement benefit cost	<u>\$ 5,236,110</u>	<u>4,524,362</u>

The weighted average discount rate used in determining the accumulated postretirement benefit obligation was 7.50% and 6.75% as of June 30, 2000 and 1999, respectively. For measurement purposes, health care costs other than Medicare Part B were assumed to increase 8.5% and 9.0% for the years 2000 and 1999, respectively, and to decrease .5% per year until 2007 and remain at 5% thereafter. Medicare Part B costs were assumed to increase 4% annually.

In 1998, the Foundation adopted a policy of funding an amount approximating the annual amortization of the transition obligation in a trust established under Section 501(c)(3) of the Internal Revenue Code. For the years ended June 30, 2000 and 1999, the Foundation made contributions to the trust of \$2,400,000 and \$800,000, respectively.

The Foundation also provides postemployment benefits, including salary continuance, to certain employees. The cost of these benefits is provided over the employees' years of service. Postemployment benefits' liability included in accounts payable and accrued expenses was approximately \$580,000 in 2000 and \$610,000 in 1999.

**(5) Deferred Revenue**

At June 30, 2000 and 1999, grants and contracts pledged to and accepted by the Foundation and various units of the University were designated for the following projects:

	<b>2000</b>	<b>1999</b>
Research	\$ 40,408,018	39,179,956
Training	20,174,200	18,239,806
Academic development	34,626,908	33,204,429
Student services	6,557,068	4,457,549
Other	<u>3,317,733</u>	<u>3,365,390</u>
	<u>\$ 105,083,927</u>	<u>98,447,130</u>

(Continued)

**(6) Term Loan Payable**

In 1997, the Foundation entered into a \$3,000,000 Term Loan Agreement, due in 2003, and bearing interest of 0.8% above the adjusted Euro dollar rate. Proceeds of the loan were used to finance tenant improvements in connection with the relocation of office space. During the fiscal year ended June 30, 2000, the Foundation fully repaid the remaining balance under this loan.

**(7) Commitments**

The Foundation leases office space owned by the University. The lease agreement, which expires on June 30, 2007, provides for annual fixed rentals of \$400,000, payable in equal quarterly installments. The future minimum annual payments required under the lease agreement are as follows:

<u>Year ending June 30</u>	<u>Amount</u>
2001	\$ 400,000
2002	400,000
2003	400,000
2004	400,000
2005	400,000
Thereafter	<u>800,000</u>
	<u><u>\$ 2,800,000</u></u>

Additionally, the lease agreement does not require the Foundation to pay any escalation charges.

**(8) Fair Value of Financial Instruments**

The carrying amounts of cash and cash equivalents, grants and contracts receivable, accounts payable and accrued expenses, and deposits held in custody for others approximate fair value due to the short maturity of these financial instruments. The fair value of investments is based upon values provided by the Foundation's external investment manager or upon quoted market prices.

Financial Statements and Schedules

June 30, 2001 and 2000

(With Independent Auditors' Report Thereon)

345 Park Avenue  
New York, NY 10154

### **Independent Auditors' Report**

The Board of Directors  
Research Foundation of  
The City University of New York:

We have audited the accompanying balance sheets of the Research Foundation of The City University of New York (the Foundation) as of June 30, 2001 and 2000, and the related statements of activities and cash flows for the years then ended. These financial statements are the responsibility of the Foundation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Research Foundation of The City University of New York as of June 30, 2001 and 2000, and the changes in its net assets and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

Our audits were made for the purpose of forming an opinion on the basic financial statements of the Foundation taken as a whole. The supplementary information included in Schedules 1 through 6 is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information has been subjected to the auditing procedures applied in the audits of the basic financial statements and, in our opinion, is fairly stated in all material respects in relation to the basic financial statements taken as a whole.

**RESEARCH FOUNDATION OF  
THE CITY UNIVERSITY OF NEW YORK**

Notes to Financial Statements

June 30, 2001 and 2000

**(1) Organization**

The Research Foundation of The City University of New York (the Foundation) was chartered in 1963 to provide post-award administration of sponsored programs for The City University of New York (the University) and other not-for-profit organizations. The Foundation is a separate legal entity and is exempt from Federal income taxes under the provisions of Section 501(c)(3) of the Internal Revenue Code.

**(2) Summary of Significant Accounting Policies**

*(a) Basis of Presentation*

The Foundation's financial statements are prepared on the accrual basis of accounting in accordance with standards established by the Financial Accounting Standards Board (FASB) for external financial reporting by not-for-profit organizations. The financial statements focus on the Foundation as a whole and present balances and transactions according to existence or absence of donor-imposed restrictions. Accordingly, net assets of the Foundation and changes therein are classified and reported as follows:

Unrestricted net assets - Net assets that are not subject to donor-imposed restrictions. In addition, grants and contracts for the performance of certain services or functions are reported in the unrestricted net asset category.

Temporarily restricted net assets - Net assets subject to donor-imposed restrictions that will be met either by actions of the Foundation or the passage of time. The Foundation had no temporarily restricted net assets at June 30, 2001 and 2000.

Permanently restricted net assets - Net assets subject to donor-imposed restrictions stipulating that funds be maintained permanently by the Foundation, but permit the Foundation to expend part or all of the income derived therefrom. The Foundation had no permanently restricted net assets at June 30, 2001 and 2000.

Revenues and gains and losses on investments and other assets are reported as changes in unrestricted net assets unless limited by explicit donor-imposed restrictions or by law. Expenses are reported as decreases in unrestricted net assets.

*(b) Grants and Contracts*

Revenue from grants and contracts, primarily for research, training, and academic development programs, is generally recognized as earned, that is, as the related costs are incurred under the grant or contract agreements. Grants and contracts awarded to and accepted by the Foundation and various units of the University, as joint grantees, for the completion of designated projects in future years are reported as accounts receivable and deferred revenue.

(Continued)

**RESEARCH FOUNDATION OF  
THE CITY UNIVERSITY OF NEW YORK**

Notes to Financial Statements

June 30, 2001 and 2000

Facilities and administrative costs recovered on grants and contracts are recorded at rates established by the Foundation with its Federal cognizant agency, or predetermined by the non-Federal sponsor. Facilities and administrative cost rates for government grants and contracts are subject to audit, and subsequent final settlements, if any, are recorded as current period adjustments. Management believes the impact of any future settlements to be immaterial to the financial statements.

**(c) *Use of Estimates***

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingencies at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

**(d) *Cash Equivalents***

Cash equivalents consist of money market accounts and securities purchased under agreement to resell with maturities of three months or less.

**(e) *Investments***

Investments are reported at fair value based upon quoted market prices. Realized and unrealized gains and losses on investments are reflected in the accompanying statements of activities.

**(f) *Fixed Assets***

Furniture, fixtures, and equipment and leasehold improvements are stated at cost. Depreciation of furniture, fixtures, and equipment is computed on a straight-line basis over the estimated useful lives of the assets, ranging from five to seven years. Amortization of leasehold improvements is computed on a straight-line basis over the estimated useful lives of the assets, not to exceed the remaining life of the lease.

Equipment purchased by the Foundation on behalf of various units of the University from grant and contract funds is to be used in the project for which it was purchased and is not included in the Foundation's fixed assets on the accompanying balance sheets.

**(g) *Deposits Held in Custody for Others***

Deposits held in custody for others reflect those resources held on behalf of the individual colleges of the University (College Recoveries and Derived Accounts). These deposits are credited with indirect cost recoveries and released time recoveries for the respective colleges.

(Continued)

**RESEARCH FOUNDATION OF  
THE CITY UNIVERSITY OF NEW YORK**

Notes to Financial Statements

June 30, 2001 and 2000

Released time recoveries represent personal service costs for individuals on the various colleges' payrolls who report effort under grants or contracts. When colleges replace an individual providing time and effort to sponsored projects, they do so by hiring, on the Foundation payroll, adjuncts whose personal service costs are reflected as deductions of deposits held in custody for others.

Facilities and administrative costs are considered recoveries of the specific colleges and, accordingly, are credited to deposits held in custody for others.

**(h) *Reclassifications***

Certain 2000 amounts have been reclassified to conform to the 2001 presentation.

**(3) Investments**

Investments held by the Foundation consist of the following at June 30, 2001 and 2000:

	2001		2000	
	Fair value	Cost	Fair value	Cost
U.S. Treasury bills	\$ 9,354,335	9,289,098	18,670,095	18,571,430
U.S. Government agency obligations	11,329,517	10,854,055	28,648,260	28,495,230
Total	<u>\$ 20,683,852</u>	<u>20,143,153</u>	<u>47,318,355</u>	<u>47,066,660</u>

**(4) Pension and Other Retirement Benefits**

Eligible employees of the Foundation and certain project personnel are covered under a defined contribution pension plan established with Teachers Insurance and Annuity Association (TIAA). The Foundation's contribution to the pension plan is based on specified percentages, ranging from 8% to 14%, of each employee's annual salary. Total pension expense for the years ended June 30, 2001 and 2000 was approximately \$6,440,000 and \$7,554,000, respectively. There are no unfunded past service costs.

In addition to providing pension benefits, the Foundation provides certain health care benefits to retired employees (including eligible dependents) who have a combination of age and years of service equal to 70 with a minimum age of 55 and at least ten years of continuous service. For the years ended June 30, 2001 and 2000, total claims paid for these benefits were approximately \$1,031,000 and \$735,000, respectively.

The Foundation accounts for postretirement medical and other nonpension benefits provided to retirees on an accrual basis during the period of their employment.

Notes to Financial Statements

June 30, 2001 and 2000

The following table sets forth the plan's funded status reconciled with the amounts shown in the Foundation's balance sheets as of June 30, 2001 and 2000:

	<b>2001</b>	<b>2000</b>
Benefit obligation	\$ (36,826,757)	(29,736,075)
Fair value of plan assets	<u>5,081,796</u>	<u>4,166,950</u>
Funded status as of June 30	(31,744,961)	(25,569,125)
Unrecognized transition obligation	12,724,528	13,481,941
Unrecognized net loss (gain)	12,832,076	(1,763,915)
Unrecognized gain on plan amendment	<u>(11,251,713)</u>	<u>—</u>
Accrued liability	<u>\$ (17,440,070)</u>	<u>(13,851,099)</u>

During 2001, the Foundation amended its medical coverage for retirees reaching age 65 after June 30, 2001, limiting coverage to the Foundation's Blue Cross Blue Shield PPO Plan.

Postretirement benefit costs for 2001 and 2000 included the following components:

	<b>2001</b>	<b>2000</b>
Service cost	\$ 2,710,456	2,974,938
Interest cost	2,202,912	1,655,005
Amortization of transition obligation over 22.8 years	757,413	757,413
Amortization of unrecognized net gain	—	(18,213)
Expected return on plan assets	<u>(251,182)</u>	<u>(133,033)</u>
Net periodic postretirement benefit cost	<u>\$ 5,419,599</u>	<u>5,236,110</u>

The weighted average discount rate used in determining the accumulated postretirement benefit obligation was 7.25% and 7.50% as of June 30, 2001 and 2000, respectively. For measurement purposes, health care costs other than Medicare Part B were assumed to increase 9.5% and 8.5% for the years 2001 and 2000, respectively, and to decrease .5% per year until 2010 and remain at 5% thereafter. Medicare Part B costs were assumed to increase 4% annually.

In 1998, the Foundation adopted a policy of funding an amount approximating the annual amortization of the transition obligation in a trust established under Section 501(c)(3) of the Internal Revenue Code. For the years ended June 30, 2001 and 2000, the Foundation made contributions to the trust of \$800,000 and \$2,400,000, respectively.

The Foundation also provides postemployment benefits, including salary continuance, to certain employees. The cost of these benefits is provided over the employees' years of service. Postemployment benefits' liability included in accounts payable and accrued expenses was approximately \$550,000 in 2001 and \$580,000 in 2000.

Notes to Financial Statements

June 30, 2001 and 2000

**(5) Deferred Revenue**

At June 30, 2001 and 2000, grants and contracts pledged to and accepted by the Foundation and various units of the University were designated for the following projects:

	<b>2001</b>	<b>2000</b>
Research	\$ 49,912,314	40,408,018
Training	25,539,564	20,174,200
Academic development	31,693,223	34,626,908
Student services	7,638,980	6,557,068
Other	<u>2,849,128</u>	<u>3,317,733</u>
	<u>\$ 117,633,209</u>	<u>105,083,927</u>

**(6) Commitments**

The Foundation leases office space owned by the University. The lease agreement, which expires on June 30, 2007, provides for annual fixed rentals of \$400,000, payable in equal quarterly installments. The future minimum annual payments required under the lease agreement are as follows:

<b>Year ending June 30</b>	<b>Amount</b>
2002	\$ 400,000
2003	400,000
2004	400,000
2005	400,000
2006	400,000
2007	<u>400,000</u>
	<u>\$ 2,400,000</u>

Additionally, see note 8 for further discussion of commitments.

**(7) Fair Value of Financial Instruments**

The carrying amounts of cash and cash equivalents, grants and contracts receivable, accounts payable and accrued expenses, and deposits held in custody for others approximate fair value due to the short maturity of these financial instruments. The fair value of investments is based upon values provided by the Foundation's external investment manager or upon quoted market prices.

**Notes to Financial Statements**

June 30, 2001 and 2000

**(8) Subsequent Event**

The events of September 11, 2001 have resulted in certain operational disruptions and facilities damage, causing the Foundation to relocate its operations. In connection therewith, the Foundation entered into a ten-year lease agreement for office space, having an average annual payment of approximately \$900,000. While the Foundation is insured for property damages and business interruption costs related to such events, the impact of these events on the Foundation's financial statements is not yet determinable.
